

# GALAXY GUARDIANS

*By combining the power of memes with real utility and charity, Galaxy Guardians gives power and opportunity to the people — to the underdogs — instead of venture capitalists and hedge funds.*

## THE PROBLEMS WE AIM TO SOLVE

---

- Cryptocurrency is still inaccessible to many people in the world. It isn't obvious to people how to get started with it, such as interacting with and using blockchain infrastructure. It means a lot of people are gated away from some amazing benefits that they bring. In most cases it is still very complex to use, so even with decent understanding of how things work it requires users to jump through a lot of unnecessary, and sometimes daunting, hoops. There is a lack of growth campaigns, resulting in a large proportion of people that are not even aware these things exist. Since people fear what they don't know, it can reinforce a culture that prevents us from progressing to bigger and better solutions.

## WHY SHOULD WE CHOOSE GALAXY GUARDIANS

---

- \$GGUARDIANS is a hyper-deflationary, inclusive and ethical BEP-20 token. It employs 7 popular protocols, combining them together in the smart contract code to give it the strength of seven tokens in one. Each of these features give \$GGUARDIANS a unique position in the market, allowing it to weather any type of storm.

# THE SIX FEATURES THAT \$GGUARDIANS COMBINES ARE

---

The six features that \$GGUARDIANS combines are:

- Burn
- Buyback
- Reflection
- Charity
- Auto-liquidity
- Marketing & Development

Together the protocols that realize these features provide a token that is wholly unique. As we take a cut of transactions and put that towards the planet and humanitarian charities, we are striving towards a net positive environmental impact to help offset the energy concerns that come with cryptocurrencies

## TOKENOMICS

TOKENOMICS to allow the different smart contract functions to occur that makes GALAXY GUARDIANS unique, each purchase transaction is taxed %10, which is split across these seven protocols. The smart contract then applies a 12% tax on sells to the PancakeSwap liquidity pool, and it further aims to decrease extremely volatility using a mechanism called anti-whale tax (this is explained in greater depth further

## PERFECT DISTRIBUTION & TOKENOMICS

- We have a perfect token distribution and fees plan that will not only bring benefit to the value of the token but also to the token holders and the liquidity pool.

<b>TOTAL AMOUNTS OF TOKENS</b>	<b>1.000.000.000.000</b>	
BURN QUANTITY	350.000.000.000	%35
AIRDRIOP & DEVELOPMENT	100.000.000.000	%10
SALE & LIQUIDITY	550.000.000.000	%55

# BUY TAX: %10

■ LIQUIDITY ■ MARKETING ■ CHARITY POOL ■ REFLECT HOLDERS

## INSTANT USAGE REWARDS

- For every active user transaction a %1 \$GGUARDIANS reward is granted to holders decentralized wallets only, fostering a healthy distributed network and community usage. The more \$GGUARDIANS is actively used, the more rewards are granted !

## CHARITY PROTOCOL

- Galaxy Guardians aims to not only help the world but inspire competitors to really look at placing wealth where it matters the most.
- Each week we take suggestions for a particular area of charity (such as ecosystem preservation, cancer research or animal welfare), and the top three suggestions go into a 24-hour poll where the community can decide who receives the allocated donation.

## BUYBACK PROTOCOL

- Our buyback protocol is our buyback function. A cut of tokens is collected by the contract and sold into BNB to buyback tokens at a later stage. When automatic buyback is enabled, whenever a sell is executed a portion of this buyback amount is used to automatically purchase tokens back from the liquidity pool. These purchased tokens are then immediately burned. The buyback system is set to manual by default, and the development team closely monitor and manage this. When enabled manually, this function will automatically trigger a buyback of tokens on each sell transaction and send these tokens directly to the burn address.

## LIQUIDITY PROTOCOL

- Our liquidity protocol is our auto-liquidity function. This function automatically grows our liquidity by taking a portion of each transaction and putting it towards the liquidity pool. The smart contract will store tokens taken from the taxed transactions inside the contract and at a swap threshold the contract will automatically take a portion of these stored tokens and sell half of them to the liquidity pool in return for BNB. It will then pair up the acquired BNB with the remaining half of the tokens that are left over, and deposit that into the liquidity pool.

## ROAD MAP

- PHASE 1
- Market Research
- Token Creation
- Website Development
- Whitepaper Release
- Contract Reliability was tested
- PHASE 2
- Fairlaunch
- PancakeSwap (V2) listing
- Start of our continuous marketing campaign
- CoinGecko listing
- Airdropevents
- PHASE 3
- International CharityEvents
- Reaching 5k members on Telegram
- Reaching 5k members on Twitter
- Coinmarketcap listing
- Donate a total of 10k Sapling
- Airdrop Events
- PHASE 4
- LOTERY & STAKING LAUNCH
- Donate a total of 10k Sapling
- Reaching 20k members on Telegram
- Reaching 10k members on Twitter
- Game Development
- CEX and other DEX listings
